sed "s/s*#.*/g; /^$/ q; s/^[:space:]*//g" file
sed "10 q" file
```

seq 10

Regular expressions

Format

<code>^</code> and <code>\$</code>	Start / end of a line
<code>.</code>	Any character
<code>[]</code> and <code>[^]</code>	Any character (not) between the brackets
<code>?</code>	Zero or one time previous character / expression
<code>*</code> and <code>+</code>	Zero or more / one time previous character / expression
<code>{x,y}</code>	Minimum x and maximum y previous character / expression
<code>()</code>	Group

Character classes

<code>\w</code> and <code>\W</code>	“word character” (a-zA-Z_) and inverse
<code>\b</code> and <code>\B</code>	“word boundary” (boundary from a word) and inverse
<code>\s</code> and <code>\S</code>	Whitespace and inverse
<code>[[:alpha:]]</code>	a-zA-Z
<code>[[:digit:]]</code>	0-9

<code>[[:alnum:]]</code>	a-zA-Z0-9
<code>\d</code> and ...	Not in grep: same as <code>[[:digit:]]</code>

Examples

KdG student numbers: `[0-9]{7}-[0-9]{2}`

Hexadecimal number of 4 numbers: `[0-9A-Fa-f]{4}`

Each number containing a minimum of 3 zeros, repeated after each other:
`[0-9]*0{3}[0-9]*`

Word “fix” in a text, different possibilities:
`[[:space:]]fix[[:space:]]`
`fix\W`
`\<fix\>`

Start with `<`, contains `@` and ends with `>`:
`<.+@.+>`

Bash shell scripting

```
#!/usr/bin/env bash
```

```
# comments
```

```
var=Hello
```

```
export globalvar=Hello
```

```
clear
```

```
echo Enter your name
```

```
read name
```

```
echo -e $var,\n$name
```

Positional parameters

\$0 (0-9)

\$# (get amount of positional parameters)

\$* and @\$ (list of all parameters)

Quotes

Single quotes: hard quotes, print what's between them

Double quotes: soft quotes, \$ and ` will be handled escape with \

Backquotes: command substitution or use \$(..)

Calculate with + - * / %

```
number=$((2+2))
```

```
let number=2+2
```

```
chmod +x script.sh
```

```
./script.sh
```

```
source script.sh
```

```
. script.sh
```

/bin/true (0) - /bin/false (1)

\$? (exit status -- exit 113)

[..] or newer version [[..]] (with regular expressions =~)

-n true if next variable has a value

-z true if the string is empty

-d true if it is a directory

-f true if it is a file

-r true if it is a readable file

-w true if there are writing permissions for the file

-x true if it is an executable file

[file1 -nt file2] true if file1 is newer than file2

[file1 -ot file2] true if file1 is older than file2

-ot reversed

[number1 .. number2]

-lt less than

-le less than or equals

-eq equals

-gt greater than

-ge greater than or equals

-ne not equals
